BUILD IN PUBLIC

I'm going to scan 100 apps built with AI coding tools.

Method first. Results on 11 Nov.

swipe →

WHY

Why I'm doing this

[FARIS TO FILL: the moment you noticed AI-built sites loading slowly. One real example, no names.]

swipe →

WHAT I MEASURE · 1

Largest Contentful Paint, on mobile.

Tool: Google PageSpeed Insights. Google's 'good' bar is under 2.5 s.

swipe →

WHAT I MEASURE · 2

Layout shift (CLS).

How much the page jumps while it loads.
Google's 'good' bar is under 0.1.

swipe →

THE SAMPLE

Public launch posts that say built with Claude Code or Cursor.

[FARIS TO FILL: exact sources and the date window.]

swipe →

RULES

No names without permission.

And no cherry-picking: the full URL list gets published with the results.

swipe →

THE BIAS I CAN'T REMOVE

Launch posts come from people proud enough to post.

That's survivor bias. I'll say so next to every number.

swipe →

HOW EACH SCAN RUNS

Same tool. Mobile. Same day. Median of several runs.

[FARIS TO FILL: confirm the number of runs per URL.]

swipe →

MY GUESS

What I expect to find

[FARIS TO FILL: your honest prediction, so you can be wrong in public.]

swipe →

WHY I CARE

What I'm building

[FARIS TO FILL: one line on what you're building and why. No pitch, no price.]

swipe →

WHAT YOU'LL GET

The raw table. The method. The most common causes, and the code that fixed them.

swipe →

Results on 11 Nov.

If the answer is boring, I'll publish that too.
