FOUNDER NOTES

4 checks I run before I tell anyone their site is fine.

swipe →

WHERE THIS CAME FROM

Why I have a list at all

[FARIS TO FILL: how this checklist came about. Real story only.]

swipe →

CHECK 1

PageSpeed Insights, mobile, LCP.

Google's 'good' bar is under 2.5 s. Desktop scores flatter you.

swipe →

CHECK 1 · WHAT I USUALLY SEE

What usually shows up

[FARIS TO FILL: what you typically find here.]

swipe →

CHECK 2

The biggest image above the fold.

Is it sized for a phone? WebP or AVIF? Width and height set?

swipe →

CHECK 3

Reload on slow 4G. What moves?

Anything that jumps is layout shift. Google's 'good' CLS bar is under 0.1.

swipe →

CHECK 4

Count the third-party scripts.

Chat, analytics, pixels, widgets. Each one needs a reason.

swipe →

THE WORST ONE

The worst I've seen

[FARIS TO FILL: the worst case you've personally seen. No names.]

swipe →

TIME

How long this takes

[FARIS TO FILL: how long the four checks take you.]

swipe →

LIMITS

What this doesn't catch.

Slow servers, slow databases, slow APIs, bad UX. This is the front-end pass, not an audit.

swipe →

THE POINT

Do it before launch, not after the complaints.

swipe →

Speed is the one part of a launch you can check tonight.
